

OperationsDNA

A real ERP, given away

The complete revenue and purchasing cycle, with accounting that posts itself: customer order, release to warehouse, picklist, pick, pack, ship — and the journal entries created from the system's own logic rather than by hand.

WHAT IT DOES

- Order to cash and procure to pay, end to end
- Automatic journal entries — accounting is a consequence, not a chore
- Inventory, manufacturing and MRP
- Employees, timesheets, expenses and payroll
- Print, export, sort and filter on every table view
- Files and tasks attachable at every level of every record

Who it is for. Small and mid-sized businesses that have outgrown spreadsheets.
