

WarehouseDNA

The floor, on a phone

Warehouse operations built for the people actually walking the aisles: picking, counting, layout and allocation, on a device that fits in a pocket.

WHAT IT DOES

- Picklists with allocation to real inventory
- Cycle counting and mismatch resolution
- Layout and location management
- Session tracking on the floor
- Phone-first screens, not a desktop app squeezed small
- Feeds the same inventory the ERP posts against

Who it is for. Distribution and manufacturing operations of any size.
